

ActiveEon – Powerful Virtual Infrastructure

1 Workload Automation

2 Resource Manager

Resource group

Fast job processing

Time & cost savings

IT Ops Team

Resource group : the management layer of IT resources that enables the creation of virtual groups for improved workload automation

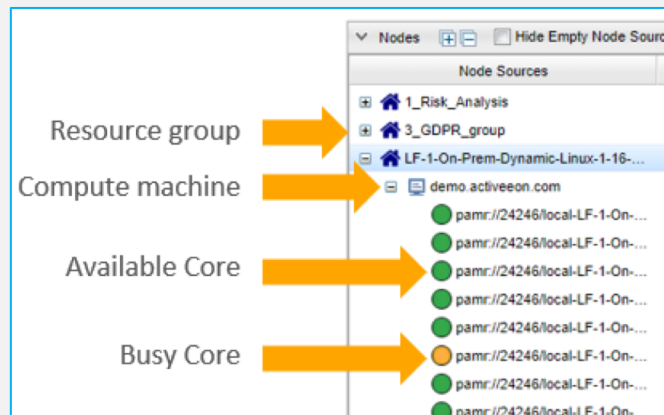

Optimize your workloads

Create virtual group that tags compute resources together for specific teams or applications. The scheduler will optimize the data flow using the right infra for the job.

Node Sources ^	#Nodes	#Busy	%Busy
1_Risk_Analysis	2	0	0%
2_Pay_Roll_Group	0	0	0%
3_GDPR_group	3	0	0%
AmazonAWS-Dynamic-Linux-1-8-CPU	0	0	0%
AmazonAWS-Static-Spot-1-CPU	0	0	0%
Azure-Dynamic-Kubernetes-1-15-CPU	0	0	0%
Azure-Dynamic-ScaleSet-Linux-1-16-...	0	0	0%

Accelerate your workloads

The scheduler actively monitors each individual core inside resource groups. As a result, it can process tasks in parallel, significantly accelerating the workload process.

Privacy laws compliance

The scheduler will automatically route workloads into the correct GDPR's resource group when a user launches a process that has a GDPR tag attached to it. Peace of mind: all processes are automated, monitored, and logged.
